Udemy

PERSONAL PROJECTS

Online Movie Management

- **Functionality:** The Online Movie Management Web Application allows users to browse movie listings and access detailed movie information. Users can view showtime, theatre locations, and book tickets, with a seamless transition to a login page for authentication before proceeding to the payment gateway. Administrators have comprehensive access through a secure dashboard, enabling full CRUD operations on movie, show, and theatre data. The application employs secure authentication mechanisms for both users and administrators
- **Technologies:** A complete dynamic website developed using React JS and bootstrap with backend technology , Spring Boot. MySQL is used for database

Sports blog website

- **Technologies:** HTML,CSS and JS for backend: PHP
- **Functionality:** There are two logins for admin and users and they can add blogs as per categories of sports and users can comment and like it as per there preference.
